PM gives I3P mantra to young scientists

EXPRESS NEWS SERVICE @ Bengaluru

PRIME Minister Narendra Modi on Friday came up with a motto for young scientists and innovators of the country and highlighted how technology has helped his government deliver services to the people on time. Inaugurating the 107th Indian Science Congress at the University of Agricultural Sciences at its GKVK Campus here, Modi told the scientists of today to 'innovate, patent, produce and prosper'.

"These four strengths will lead our country towards faster development. If we innovate, we will patent; if we patent, it will make our production smoother; and when we take our production to the people, you will prosper," he said.

He, however, advised scientists not to just look at their careers and progress, but to link them to the development and progress of the country: "New India needs not just technology, but also a logical temperament, so that we can give a new direction to our social and economic sectors," he stressed.

The PM said science and technology provide a level playing field by making opportunities accessible to all and also play a unifying role in the society. "The developments in information and communication technology now are able to provide cheaper, smartphones and cheaper data, and that has made it accessible to everyone in the country, whereas it was seen as the privilege of the few earlier. This made the common man now believe that he is not distanced from the government. He can directly connect with the government and make his voice heard," he said. P4&3
